

Graduate Studies Project

Project Name: **Aventura**

Group Size: **Individual**

Aventura

a web app to explore events

Project Description

Aventura app will solve the problem of tedious search on adventurous events online. User will be able to enter any event name or location and can get all the events nearby. User can also search by free or paid events. They can apply other important filters too. They can buy tickets online for that event. If signed in, user can also add some event on their own which is not online. They can also report an activity which will be reviewed and if true the event will be removed right away.

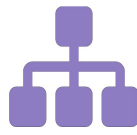

Competitive Analysis

	 All Trails	 Thrillophilia	 Meetup
Direct search or Sign Up Search?	Both	Both	Require Sign up
Friends activity log	Yes	No	Yes
All Activities Listed	No	No	Yes
User can add their activity	Yes	No	Yes
Filters	Yes	No	No
Earn a badge	No	No	No
Activities Tracker	Yes	No	Yes

Overview

Before starting the analysis and ideation process, it is very important to see what is out there. For the adventure activities there are many websites which provide a collective adventure activities. Also, the major thing which came into light during this analysis was that there is no such application which deals with all the activities. Competitive analysis really helped in filtering the features which will be added in the app and which require some good user reviews.
